

# MagicTools™ – for PI

Do more with your Predictive Index™ data by making it:

- Clean
- Current
- Connectable

## Clean Data

Over time, PI data can become cluttered with expired assessments and duplicate data, frustrating your efforts to find what you need.

MagicTools™ Clean removes expired and duplicated assessments, leaving behind only people who have useful assessment data.

## Current Data

- Have you hired people that still appear in PI as candidates with personal email addresses?
- Do you need to preserve employee assessment data before anonymizing old candidate data?
- Have you made changes in your organization and need your PI folder structure and data to match?
- Do you need to correctly link people in PI data with those in your HRIS/HCM system?
- Are you hoping to use PI org structure features?

MagicTools Export and Sync enables you to update your PI data using your current HRIS/HCM data.

## Connectable Data

Do you need to correlate and analyze your PI assessment data with other organization data?

Once your data is clean and current, MagicTools Export can pull all your Behavioral and Cognitive Assessment data out of PI so you can combine it with other data for reporting and analysis.

## Local Software = Data Control

MagicTools runs on a local computer and directly accesses the PI application programming interface (API) so you can manage your PI data 100% locally.

## Test Mode = Verification

MagicTools will not make changes until you tell it to do so, offering to let you review all intended changes before they are actually made.

## API Key = Access Control

MagicTools uses an API Key you control, touching only the PI data you allow the Key owner to touch.

## Windows or Mac Parallels

MagicTools is a Windows program that runs on Windows 10 or 11 or the Mac Parallels application.

## Flexible Licensing

MagicTools is licensed to the organization, so any number of users can run the software as needed.

License term: 1 year or 90 days (one-time cleanup)

License fees: based on company headcount tier
